Thank you for choosing to use our Dental  
Laboratory Services

*Shade Taking in the Laboratory  
with the **identa®**  
Spectrophotometric System*

COBALT CHROME CROWN & BRIDGE PROSTHETICS ORTHODONTICS

## Welcome to Phoenix

*Your Dentist has recommended that you visit the Lab in order that we can obtain a first hand understanding of the aesthetic requirements for the restoration being undertaken.*

*Our technicians will determine the correct shade, degree of translucency and morphology to ensure the best possible result.*

*This is an informal and painless process so you need have no cause for concern.*

*The shade will normally be established using a spectrophotometer. This is a specially designed light meter which can determine the natural shade of your teeth irrespective of the ambient light conditions.*

*Please note that in order for us to obtain the correct shade you should not eat food with strong colouring agents e.g. curries or drink red wine for 24 hours before your visit*

*As you can see from the examples below, our teeth often feature a high degree of individuality and meeting the technician who will be doing the work therefore provides an opportunity to discuss any concerns you may have and ensure that your individual requirements are noted.*

*Variations in format and degree of translucency*

*Variations in characterisation*

*We hope you will be delighted with the results. Our excellent aesthetics will help you feel more confident when eating, smiling and appearing in public*
